

NSA Exclusion - ISP Country Exclusion

Problem statement 1: Rules fire on events that are coming from Microsoft and Zscaler. The goal of these rules are to trigger on the Users actual country based upon the users home ISP.

Suggested Action: We recommend excluding 'microsoft corporation' and 'zscaler' in this rule activity. This will prevent the most common of the Multiple Country False Positives.

Navigate to **Analytics Rules > Rule Exclusions**

Select **Add**

Exclusion name: ISP Country Exclusion

Exclusion description: Country expected for User ISP and not for Microsoft and/or Zscaler

Condition: containsAny(geo_src_ip,"microsoft corporation","zscaler")

Specify "from this country" Rules as seen in this screenshot.

Exclusion Name

ISP Exclusion

Description (optional)

ISP Exclusion for known IT Infrastructure.

Condition what to look for

Condition

containsAny(geo_src_ip,"microsoft corporation","zscaler")

 Use any User entity Attribute or CIM fields to define your condition Check [Documentations](#) for syntax.

Scope Exclude from all analytics rules, or choose a rule or rule family to exclude when the condition is met.
